## VECTOR, XEROX PILOT CHUTES

Sometime ago the Relative Workshop recommended that their old type 'Vector' spring pilot chutes (where the spring is tapered - large base and small top) be replaced by their new 'balloon type' (6 inch top & bottom).

Because of a number of slow reserve deployments on Vector/Zerox type containers reported to STC at the meeting of 13th December 1990, STC decided that at the next reserve repack all old type Vector pilot chutes or pilot chutes of an identical pattern are to be replaced with new type pilot chutes.
