

# SAFETY NOTICE

2/97

## TSE T17 Reversed Risers

Following Safety Notice 1/97 TSE T17 Reversed Risers are now grounded

### **Background**

Following the above Safety Notice a considerable amount of testing took place on Type 17 Reversed Risers. What these tests highlighted was that it was not one single problem, but combinations of faults. Therefore the only way of eliminating this problem was to discontinue their use.

At the Riggers and STC meetings of 19th June 1997 it was decided that these risers be grounded permanently with immediate affect.

Parachutists should contact the Manufacturer for further assistance.
