

# RESERVE ride have you considered...?

Where are the steering toggles?

You are on a reserve that you have never jumped before. Do you know what it looks like, or what colour it is?

Where will you land?

What is the wind direction?

How do you land the parachute?

How is the steering reacting?

How fast are the turns?

Where is the stall point?

Where is the landing area?

Where is your freebag?

Where is your main parachute?

Maybe you don't know all the answers - but at least you thought about the questions!

Stay safe
